To Whom It May Concern,

It was a pleasure working with the team at VERA Industrial. From initial phone calls, pre-job site meetings and project pricing to site work, I am satisfied that we are working with one of the best companies in their industry.

VERA Industrial completed Rock Scaling for our road heading in Orford Bay, Bute Inlet on branch road 98 to bring down some precarious boulders. The project was time sensitive and we were impressed how quickly VERA accomplished the job without compromising on safety. The team at VERA takes safety seriously and as a result completed the project with no first aid or safety infractions.

VERA completed the work efficiently in 8 days between July 19-26, 2018. To date, the scaling work that was done has not moved or needed to be revisited.

The communication with our office throughout the project was frequent and professional. VERA worked well with outside geotechnical consultants and implemented all the necessary technical and safety procedures required to finish the job successfully. We were happy with the overall service and the final project completion. The team at VERA exceeded expectations on a remote job site accessible only by boat, floatplane or helicopter and I would definitely hire VERA again.

VERA performed the following services at our project:

- Rock Scaling
- Rock Drilling
- Rock Blasting
- Rope Access Work
- Consultation with Contracted Geotechnical Engineer
