To Whom It May Concern,

VERA Industrial assisted our onsite crew at our Dam Building project for Cermaq Canada at their Little Bear Bay Fish Hatchery in August-September 2017. The VERA team of drillers and the onsite blaster completed the project with zero incidents, delays and no equipment damage.

The team at VERA exceeded all expectations on an interesting work area that was located in an active stream way, where the water was diverted. VERA completed drilling and blasting operations within two feet of an active penstock that was supplying the fish hatchery. VERA was extremely professional in the way this project was undertaken and had numerous safety protocols in place that had to be adhered to. We were extremely happy with the overall service and the final project completion.

There was a moment that VERA thought that by undertaking a blast it would compromise an already thin walled steel pipe and they called me to put a temporary wrap over the pipe as a precaution. I must say the open communication on this matter was very efficient.

It was a pleasure working with the entire team at VERA Industrial. The ability of VERA Industrial to provide a wide range of skills and knowledge was critical to our project. I quite enjoyed working alongside the VERA team.

VERA Industrial performed the following tasks while at our project:

- Rock scaling
- Drilling & Blasting
- Expanding Grout
- Rope Access Drilling atop a Waterfall

Kind regards,
