### **Western Grater Contracting Ltd. - Vera Industrial Reference**

---

To Whom It May Concern,

Western Grater has contracted the team at Vera Industrial for numerous projects to date with the first major project for the City of Langford at 3680 Trans Canada Hwy. During this project their team supported our operations by conducting a full scaling scope of all areas identified by the Project Geotechnical Engineer that required the removal of unstable material blocks, vegetation and organics all above a paved access road.

VERA also completed drilling and installation of a TECCO G65/3 containment system to secure a boulder uphill of the immediate scaling areas so future work could continue safely. Vera's scaling team completed the work efficiently and safely between October and November in 2020.

On another project (28 February 2022) at an active busy downtown worksite they effectively removed multiple slabs of concrete that had collapsed from subsidence from a rain event onto active utilities and scaled off overhead hazards so our team could approach safely to spray a shotcrete buttress. This was an emergency job and Vera's prompt mobilization and efficient works greatly assisted in mitigating the schedule implications from this unanticipated rock fall.

Since working with VERA Industrial we have experienced project success on challenging scopes and have had no complaints to date. Their outstanding safety and meticulous approach to their scope of work is why we will continue to work with them on future projects.

Yours truly,

Jared Wells
