To whom it may concern:

Vera Industries recently worked as the general contractor on a rock slope stabilization project that Westrek Geotechnical had designed. Westrek also conducted construction field reviews, working closely with Vera Industries and Andrew Clarke specifically. The work involved both scaling and rock bolting in a very tight space between a rock slope and a house. Vera were flexible with design changes, necessitated by conditions uncovered by the scaling, and provided good advice regarding constructability issues. Andrew was diligent about updating Westrek on work progress and had a good rapport with the homeowners. Despite the design changes, the work was completed on budget and Westrek were quite satisfied with the outcome.

We look forward to working with Vera Industries again in the future.
